SEO Analysis

SEO Issues Summary

4 issues found, 7 checks passed

Failed Checks

❌ **Title Too Long**

Your page title is too long. Keep it under 60 characters to ensure it displays properly in search results.

❌ **Description Too Long**

Your meta description is too long. Keep it under 160 characters to ensure it displays properly in search results.

❌ **Has Render Blocking Resources**

Your page has 9 render blocking resources. This can negatively impact page load speed.

❌ **Missing Structured Data**

Your page does not have structured data. Structured data helps search engines understand your content better.

Passed Checks

✅ **Canonical Tag Present**

Your page has a canonical tag, which helps prevent duplicate content issues.

✅ **H1 Tag**

Your page has exactly one H1 tag, which is optimal for SEO.

Images Have Alt Text

All images on your page have alt text, which is good for accessibility and SEO.

Favicon Present

Your page has a favicon, which helps with brand recognition and improves user experience.

No HTTPS to HTTP Links

Your page does not have any links to HTTP pages, which is good for security.

Good Content Rate

Your page has a good content-to-HTML ratio, which is favorable for SEO.

Social Media Tags Present

Your page has social media tags, which improve how your content appears when shared on social platforms.

Accessibility Analysis

Accessibility Issues Summary

2 issues found, 6 checks passed

Failed Checks

❌ **Links without discernible text**
All links must have discernible text to be accessible to screen readers.

❌ **Iframes without title**
All iframe elements must have a title attribute to be accessible to screen readers.

Passed Checks

✅ **HTML lang attribute**
The HTML element has a valid lang attribute.

✅ **No deprecated elements**
The page does not use deprecated HTML elements like <blink> or <marquee>.

✅ **Images have alt text**
All images have alternative text, making them accessible to screen readers.

✅ **Buttons have discernible text**
All buttons have discernible text, making them accessible to screen readers.

Unique ID attributes

All ID attribute values are unique within the document.

Document has title

The document contains a title element, which aids in navigation.

Indexability Analysis

Indexability Issues Summary

0 issues found, 6 checks passed

Passed Checks

✅ **No <noscript> tag in <head>**
The <head> section does not contain any <noscript> tags, which is good for indexing.

✅ **<head> contains only valid HTML elements**
The <head> section contains only valid HTML elements, which is good for indexing.

✅ **Canonical URL is valid**
The canonical link element has a valid href attribute.

✅ **Canonical Link element has valid attributes**
The canonical link element has only valid attributes.

✅ **Meta robots properly placed in <head>**
All meta robots tags are properly placed in the <head> section.

✅ **Page allows indexing**
The page does not have a noindex directive in the meta robots tag, allowing search engines to index the page.
